

HOME SAFETY MANAGEMENT

INTRODUCTION

This software is used to manage the home safety system which involves the sensors which alerts the owner in the abnormal cases

SCOPE: To send warning and reminders to the owner in the times of emergencies

PURPOSE: To maintain the home safety efficiently in absence of the owner using software

ANCRONYMS AND ABBREVIATIONS:

HSMS: Home Safety Management System

AWL: Alert and Warning List

DBMS: Data Base Management System

REFERENCES: IEEE Standards, National Home Safety Management Corporation

OVERALL DESCRIPTION

The Software/Applications is built and created to work as an efficient Home Safety assuser and to be prepared at the time of accidents.

PRODUCT PERSPECTIVE: The perspective of the project is to alert the owner and make for help at the time of emergencies.

CHARACTERISTICS: 1. Works like an Artificial Intelligence

2. Has a well built communication

3. Works with IOT

CONSTRAINTS: 1. Can't work without the electric current.

2. High speed network compulsory

3. Can't Work without the help of the High-end sensors

SYSTEM FEATURES

1. Has Internet Of Things
2. Software with Connected the Landline
3. Alerting system
4. AVL involved
5. has connection with nearby police station and Fire engines

EXTERNAL INTERFACE REQUIREMENTS

1. SOFTWARE REQUIREMENTS: an well built software
2. HARDWARE REQUIREMENTS: Senors, Landline, Alarams
3. NETWORK REQUIREMENTS: Internet all time

FUNCTIONAL REQUIREMENTS

1. All working sensors
2. Effecient communication
3. Owner should compulsorly know how to handle andriod devices
4. Available nearby Police stations

NON FUNCTIONAL REQUIREMENTS

1. Fast sensing sensors
2. Effecient system
3. Easy to Comminucate with IOTs
